AMANTLE KEAMOGETSE TEMO

Final-year computer science student, aspiring data scientist and AI engineer

071 512 3023 Pretoria, Gauteng amantletemo29@icloud.com

PROFESSIONAL SUMMARY

Detail-oriented Computer Science student specialising in data analysis and intelligent systems. Focused on transforming raw data into actionable insights through machine learning and innovative software design. Experienced in cleaning datasets, training models and deploying solutions. Dedicated to mentoring peers and addressing complex challenges while continuously enhancing skills in data science and AI.

LINKS

- GitHub: https://github.com/AKT-TECH49-DEV
- LinkedIn: https://www.linkedin.com/in/amantle-temo-54bb6b369

SKILLS

- Programming Languages: Java, C++, Python, TypeScript
- Data Science and AI: PyTorch, NumPy, Pandas, OpenCV, Hugging Face Transformers, machine learning, model evaluation, feature engineering
- Data and Analytics: Statistics, statistical programming in R and SAS, data cleaning and visualisation
- Databases: MySQL, PostgreSQL, NoSQL, database design and management
- Tools and Platforms: Git, Docker, Supabase, Azure, Firebase, Microsoft Office
- Web and Mobile Development: Node.js, PHP, web and mobile frameworks
- Methodologies: Agile Development, Project Management, Test-Driven Development
- Soft Skills: Mentorship and guidance, curriculum development, user-centric design, quality assurance, cross-functional collaboration, technical writing, critical thinking, time management, problem solving, empathy

WORK EXPERIENCE

Mentor

Stars Mentorship Programme, Pretoria | 2026 - 09/2026

- Mentored first-year Computer Science students to guide them through their transition into university life and the demands of the degree.
- Guided mentees through core modules, study strategies and problem-solving approaches in programming and mathematics, enhancing their academic understanding.
- Supported mentees in goal setting, time management and utilising campus resources, fostering their confidence in a technical environment.

EDUCATION

Bachelor of Science: Computer Science

University of Pretoria, Pretoria, South Africa | Expected 12/2026

- Key Modules: Artificial Intelligence, Machine Learning, Data Structures and Algorithms, Database Systems, Software Engineering, Concurrent Systems, Computer Security and Ethics, Computer Networks, Operating Systems.
- Capstone: Supa Neighbour, a community-driven Android and web platform, built with industry client, that uses an AI matching engine, trust scoring and geolocation to connect residents with nearby helpers for short-term household tasks.

National Senior Certificate

Langenhoven Hoërskool, Pretoria, South Africa | 12/2022

- Awarded All-Round Student of the Year in 2022 for academic, leadership and service contributions.
- Member of the Executive Committee, leading school-wide initiatives and representing the student body.
- Subjects: Mathematics, Physical Sciences, Life Sciences, Accounting, English Home Language.

PROJECTS

Supa Neighbour, Community Support Platform

COS 301 Capstone Project | April 2026 - Present

Roles: Developer, AI Engineer, Service Engineer, Integration Engineer, Tester

- Building a secure, community-driven Android and web platform where residents can request and provide short-term help with household tasks such as plant care, pet feeding, bin days, parcel collection and home check-ins while they are away.
- Contributing to the AI-powered matching engine that recommends helpers using proximity, trust score, availability, skill tags and user preferences.
- Exploring AI enhancements such as suggested tasks based on travel patterns, auto-generated task checklists and computer-vision insights on uploaded photos.
- Working within an Azure-based architecture with a modular backend, cloud database, real-time messaging and role-based access control for residents, helpers and administrators.

MISP, Municipal Integrated Service Portal

COS 301 Mini Project | March 2026 - April 2026

Roles: Services Engineer, Integration Engineer, Tester

- Contributed to a web and mobile platform that connects residents with municipal services, enabling account management, transparent billing, fault reporting and streamlined work-order dispatch.
- Worked on the Services domain covering fault logging across predefined categories such as water, electricity, roads and sanitation, along with GPS-based location tagging, image uploads and automatic reference-number generation.
- Helped design the data model so that fault reports, work orders and status transitions could be aggregated into meaningful insights on service-delivery performance.

INTERESTS

I love working with people and thrive in collaborative spaces where different perspectives sharpen an idea. I'm deeply inquisitive and enjoy dissecting data to uncover the reasoning behind patterns and why systems behave the way they do. Learning is a constant for me, whether it's picking up a new tool, exploring a new area of AI, or refining the way I approach a problem. Outside of tech, I enjoy mentoring, meaningful conversations, and finding small ways to improve the routines and systems around me.
